DETAILED ACTION

The Amendments and Remarks filed 17 November 2005 have been entered.

Allowable Subject Matter

Claims 1-4 and 6-9 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance:

The best prior art of record discloses two separate an x-ray microscopic inspection apparatus configurations, including a first, as taught by Wang (US Patent 5,044,001), wherein a magnetic field generating portion is disposed separately from both the ultra-high vacuum electron gun chamber and the electron generating portion and a second configuration, as taught by Wilkins (US Patent 6,430,254) wherein the electron generating portion is disposed within the magnetic field generating portion and both are disposed in a single ultra-high vacuum electron gun chamber. However, the prior art fails to teach or fairly suggest an x-ray microscopic inspection apparatus wherein the magnetic field generating portion is disposed separately from the ultra-high vacuum electron gun chamber and the electron generating portion is disposed in the magnetic field, as claimed in claim 1. Claims 2-4 and 6-9 are allowable by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- US Patent 5,044,001 discloses a magnetic field generating portion disposed separately from both the ultra-high vacuum electron gun chamber and the electron generating portion (figure 7).
